#### **Problem**

- Average stock coverage of 67 days, with average supplier lead time of 31 days
- £18.1m worth of inventory held in stock due to inconsistent deliveries by the supplier
- 4000 pallets stored in the warehouse

#### Root causes

- Lack of frequent KPI tracking: stock value, stock coverage or supplier Lead Time
- Component ordering based on forecasts with low accuracy
- No repercussions for suppliers who fail to comply with service level agreements

# Solution approach

- Implementation of Periodic ABC Classification (frequency and volume) to identify Material Requirement Planning and Reorder Point articles
- Reorder Point Pilot Tool in Excel to validate the concept
- Renegotiation of supplier contracts: Lead Times, frequency of delivery, minimum order quantity, consignment and packaging
- Pull Planning Manual and Standardisation of planning processes
- Standard Reports to communicate with suppliers

### **Benefits**

Savings £2.3m
